CS5200 Fall 2020: Practicum 1

Chandra Davis, Evan Douglass

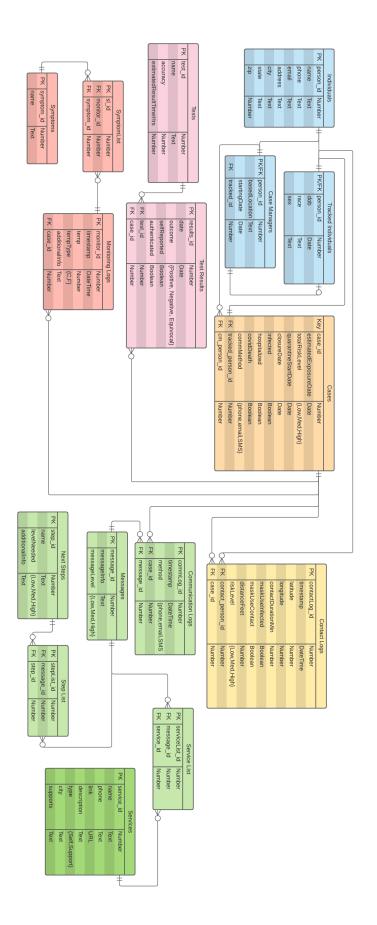

Conceptual Model: UML

 $\label{lem:lem:https:/app.lucidchart.com/invitations/accept/5602312e-dfc3-4423-975c-47190ce6022e$

Logical Model: ERD

 $\label{logical model} \begin{tabular}{l} View the logical model in Lucid Chart here: $https://app.lucidchart.com/invitations/accept/7b497cbf-268d-4a03-b1a7-822b5a844fea \end{tabular}$

Schema

 $\label{localization} Wiew the schema in Google Docs here: $https://docs.google.com/document/d/108pk51aed3BJSaBcwO2EMbT8I3ru_wpGTcTN4W-DbIM/edit?usp=sharing$

Individuals(<u>person_id: Number</u>, name: Text, phone: Text, email: Text, address: Text, city: Text, state: Text, zip: Number)

TrackedIndividuals(person id: Number, dob: Date, race: Text, sex: Text)

CaseManagers(<u>person_id: Number</u>, basedCity: Text, basedState: Text, startingDate: Date, <u>infected_id: Number</u>)

Tests(test_id: Number, name: Text, accuracy: Number, estimatedResultTimeHrs: Number)

TestResults(<u>results_id: Number</u>, date: Date, outcome: {Positive, Negative, Equivocal}, selfReported: Boolean, authenticated: Boolean, test_id: Number, case_id: Number)

MonitoringLogs(monitor_id: Number, timestamp: DateTime, temp: Number, tempType: {C, F}, additionalInfo: Text, case_id: Number)

SymptomList(sl_id: Number, monitor_id: Number, symptom_id: Number)

Symptoms(symptom_id: Number, name: Text)

Cases(<u>case_id</u>: <u>Number</u>, estimatedExposureDate: Date, totalRiskLevel: {Low, Med, High}, quarantineStartDate: Date, closureDate: Date, infected: Boolean, hospitalized: Boolean, covidDeath: Boolean, commMethod: {phone, email, SMS}, <u>cm_person_id</u>: <u>Number</u>, <u>infected_person_id</u>: <u>Number</u>)

ContactLogs(contactLog_id: Number, timestamp: DateTime, latitude: Number, longitude: Number, contactDurationMin: Number, maskUseInfected: Boolean, maskUseContact: Boolean, distanceFeet: Number, riskLevel: {Low, Med, High}, contact_person_id: Number, case_id: Number)

CommunicationLogs(<u>commLog_id</u>: <u>Number</u>, timestamp: DateTime, method: {phone, email, SMS}, case_id: Number, message_id: Number)

Messages(message_id: Number, messageLevel: {Low, Med, High}, messageInfo: Text)

StepList(<u>stepList_id: Number</u>, message_id: Number, step_id: Number)

NextSteps(step_id: Number, name: Text, levelNeeded: {Low, Med, High}, additionalInfo: Text)

ServiceList(serviceList_id: Number, message_id: Number, service_id: Number)

Services(<u>service_id: Number</u>, name: Text, phone: Text, link: Text, description: Text, type: {Self, Support}, city: Text, supports: Text)

Creating Database Tables

Should you wish to inspect the scripts that create the database and populate data, they can be found at https://github.com/eldss-classwork/databases-practicum1-scripts along with other Practicum 1 related files, including this one.

The following images will show a progression from an empty database through table creation in MySQL Workbench.

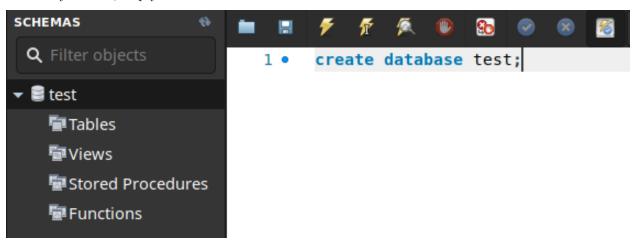

The MySQL Workbench start screen.

Welcome to MySQL Workbench

MySQL Workbench is the official graphical user interface (GUI) tool for MySQL. It allows you to design, create and browse your database schemas, work with database objects and insert data as well as design and run SQL queries to work with stored data. You can also migrate schemas and data from other

database vendors to your MySQL database. Browse Documentation > Read the Blog > Discuss on the Forums > MySQL Connections ⊕ ⊗ cs5200-practicum1 **●** evan 127.0.0.1:3306

The newly created, empty test database.

The test database after table creation.

```
